Design Specification: PLPI Assembly Control Software

VMP/A5/0007/09/v12

1. Introduction

As per the URS, there should be changes to be made in the PLPI system like disapplication of FMD safety features and other updates in the PLPI system as the implementation of Windsor Framework and onsite audits performed by third party contract providers which is mentioned in PLPI M_CC24-0007.

1.1 Purpose of the document

The purpose of the document defines the design specification of "PLPI Assembly control software" to meet the user's need as described in the User Requirement Specification (URS) & in URS Addendum 1 of PLPI Software.

1.2 Scope

This document outlines the functional aspect of disapplication of FMD and changes in PLPI assembly control software.

1.3 Abbreviations

These abbreviations are thought to help and understand the reading of the document.

IT	Information Technology
PLPI	Parallel License Parallel Import
URS	User Requirement Specification
FS	Functional specification

2. Overall Description

This section provides a general description of the software characteristics. It does not state specific requirements but it provides information that makes the requirements, defined in detail in the following sections so it is easier to understand.

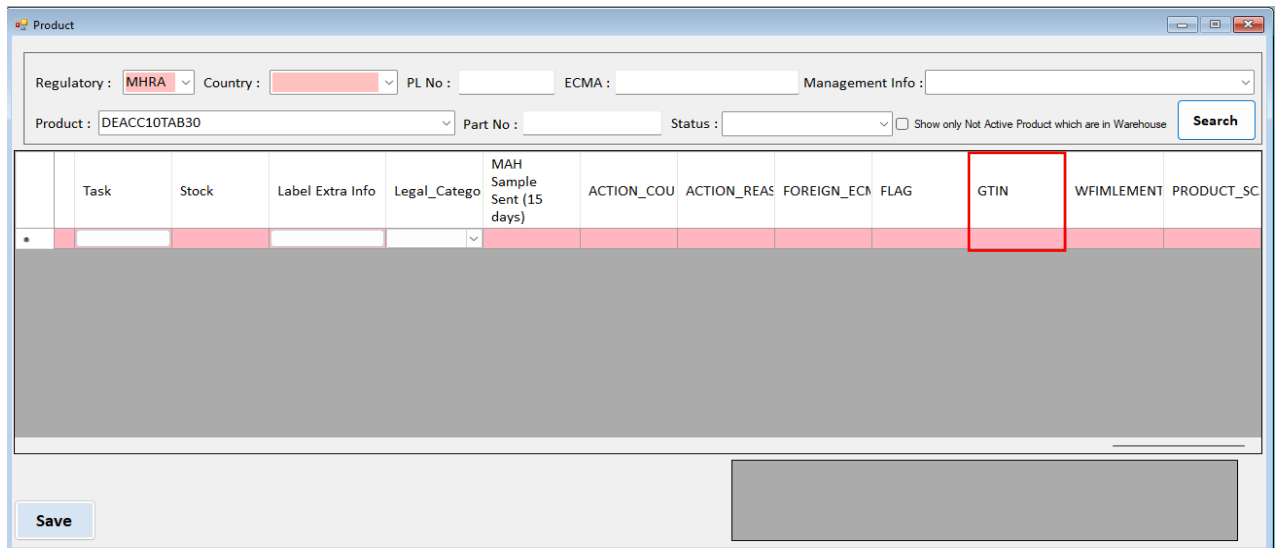

3. Design Specification

This section describes the design attributes of the software that will be implemented in order to meet the requirement defined URS & in URS Addendum 1 of PLPI Software.

3.1 Remove GTIN no column from certain modules

Design Specification: PLPI Assembly Control Software VMP/A5/0007/09/v12

3.2 Remove certain columns from Product module

The screenshot shows the 'Product' module interface. The top section contains search filters: Regulatory (MHRA), Country (), PL No (), ECMA (), Management Info (), Product (), Part No (DEACC10TAB30), and Status (). A checkbox for 'Show only Not Active Product which are in Warehouse' is present, along with a 'Search' button. Below the filters is a table with the following columns: Sample Bar, Product Add EMVO, EMVO History, Submitted History, Status, Hub Status, Management Info, History, and Part No. The table is currently empty, showing only a header row and a single data row with a red background. A 'Save' button is located at the bottom left of the interface.

The screenshot shows the 'Product' module interface. The top section contains search filters: Regulatory (MHRA), Country (), PL No (), ECMA (), Management Info (), Product (), Part No (DEACC10TAB30), and Status (). A checkbox for 'Show only Not Active Product which are in Warehouse' is present, along with a 'Search' button. Below the filters is a table with the following columns: Leaflet Size (3), Braille, Braille File, Product Mock Up, Updated By, Checked By, Annex Date, Date Revised, Variation Info, Product_ID, Comments, Regulatory, and Security Seals Pack. The table is currently empty, showing only a header row and a single data row with a red background. A 'Save' button is located at the bottom left of the interface.

Product Add Emvo, EMVO History, Submitted History, Hub Status & Annex Date will not be displayed to the user.

3.7 Windsor Framework in Product module and Alert pop-up in BNS Batch Add

The screenshot shows the 'Product' module interface. At the top, there are input fields for 'Regulatory' (set to MHRA), 'Country', 'PL No', 'ECMA', and 'Management Info'. Below these are fields for 'Product', 'Part No' (DEACC10TAB30), and 'Status'. A 'Search' button is on the right. The main table has columns: 'CHECK LIST MASTER BAR VERIFICATION', 'Sample Bar', 'Status', 'Management Info', 'Windsor Framework', 'History', and 'Part No'. The 'Windsor Framework' column has a dropdown menu open, showing 'YES' and 'NO' options. A 'Save' button is at the bottom left.

Windsor Framework will be linked to the BNS Batch add module such as if the user selected 'Yes' system should allow to proceed further if selected 'No' system should not the user to proceed it should show a pop-up.

The screenshot shows the 'BNS Batch Creation' interface. At the top, there are input fields for 'Country', 'Site', 'Category', 'Stock', and 'Status', with a 'Search' button. Below these is a table with columns: 'Select', 'PRODUCT_STAT', 'SITE', 'COUNTRY', 'PART_NO', 'FOREIGN_NAME', 'ECMA', 'STRENGTH', 'PACK_SIZE', 'BATCH_NO', 'EXPIRY_DATE', 'QUANTITY', and 'IM'. An alert pop-up is displayed in the center of the table, stating: 'ALERT! Please contact Regulatory as Windsor Framework has not been selected'. At the bottom, there is a 'SAVE' button and summary statistics: 'Total BNS Batch : 191', 'Total Composite Batch : 371', 'Total Packs : 52280', and 'Not Printed BAR'.

Addendum Requirement

3.2 Removal of statement from process 1 of the BAR

PROCESS 1
 Issuing of batch assembly record, Refer: SOP/PLPI/0006

BAR Issuer check below details

- Ensure PCL sheet has been checked for completeness and invoice is attached
- » Batch number and expiry date
- » Product name, Strength, Pack size and ECMA/EU number

This batch is:

Consolidated ☒ Composite ☒ Controlled Drug ☒ Cold Chain ☒

Product

BAR Created By: Juston Nazareth Rodri Date: 01 Oct 2024, 9:00 Confirm By (Initial & Date)

Comments

Product Name, Strength Pack size, Blister per pack, Mfg. Batch Number, B&S Batch No., Expiry Date & PL No. /EU No. will be filled by default.

4.0 Additional Non-Functional Requirements

URS ID	Function/Feature	Description/Specification
3.12.1	Damage/Regulatory sample input column in QP Release Log record	Damage/Regulatory column will be added in the QP Release log record
3.12.2	Assembled Quantity in Qty issue Column	QP Release log sheet will display Assembled Quantity in Qty issued Column
URS: 3.1 (addendum)	QP Release Log Record	Allow the user to merge the columns like B&S and expiry date as "Batch No./Exp Date" and add country of origin in expiry date column
URS: 3.3 (addendum)	Update of required quantity and certain statements from Sample BAR & Master BAR	1. (n%1) +2 will be amended to (n%1) +1 2. Statement in process 4 will be changed from "Attach 2 random Pre-printed cartons to the reverse page of process 4" to "Attach 1 random Pre-printed carton for assembly"
3.4 (addendum)	Width Increase	Reference code column width will be increased in process 3,4,5,6 & 8 in the Master BAR and Sample BAR
3.7 (addendum)	Audit Trail for person – BNS Batch Summary Log	Audit trail of a person will be displayed in the Batch Summary log if relevant continuation page is printed
3.8 (addendum)	Increase in Character limitation	Limitation character will be increased to 80 in "Product" and "Regulatory log" modules

4.1 Audit Trail

For each order request from its creation to approval or rejection, whole request's audit log should be maintained.

4.2 Availability

The system should be available online **24*7*365 service**, with the exception of scheduled and pre-notified system maintenance down times.

Data should become immediately available for use, both during input and for reporting unless otherwise negotiated with the IT Hardware Team. The IT Hardware Team will ensure that system resources are adequate for timely report generation response times and overall software functionality. The IT Hardware will ensure that regular system maintenance is not completed during peak operation periods.

4.3 Capacity Limits

There is no limit on number of transactions, concurrent users. However, there must be facility that no 2 or more users can change the same action concurrently.

4.4 Performance

Checking the fact that the system should perform as what every user expects. So, in every action-response of the system, there are no immediate delays.

In case of opening windows forms, of popping error messages, saving the data to database, saving file over network shared drive, etc. should delay much below 20 seconds.

Assuming 100 users are working simultaneously then also it should give quick response.

4.5 Recoverability

For data and file recoverability our Database Administrators and Network Administrator periodically perform taking back-up practice. From that back-up important data and files will be recoverable any time.

4.6 Security Requirements

The system is hosted on B&S server at the Perivale site. Server rooms are access controlled to prevent unauthorised access and are protected by firewalls to ensure data security. All users are allocated a unique username and password and all actions are recorded within an audit trail

4.7 Error Handling

Checking that the system always has something to function and always pop-up error messages in case of component failure. In that case the error messages appear when something goes wrong so to prevail availability problems.

4.8 Usability

The system will be subject to user acceptance testing as part of the development process to ensure the user experience meets the requirements.

4.9 Accuracy & Validity

The system will employ numerous data quality assurance techniques, including but not limited to:

- Input masks
- Drop down lists with standard responses
- Record data completeness requirements
- Basic data logic warnings
